

Met Mast Inspection

ENGIE Fabricom has extensive knowledge in the manufacture and installation of offshore damper systems including inspection of main support structures using Eddy current and MPI NDT techniques, undertaking statutory inspections and bolt torquing to extend the operational life of a Met Mast.

Utilisation of rope access technicians to undertake the works which include plating, welding, rigging and painting ensures the safest, most cost effective solution with surety of programme delivery.

Our aim is to be our clients'
Partner of Choice
