

Service Contracts

ENGIE Fabricom has in-house, authorised technicians to carry out all isolations to work on mechanical, electrical, hydraulic and pneumatic pressure systems.

These service technicians are supported by an onshore team, utilising and maintaining proven systems for control, recording and reporting.

This ensures best practice and the maintenance of our health and safety performance within this demanding, offshore environment.

Typical service works involved with offshore wind turbine systems includes:

- Working in accordance with the Wind Turbine Safety Rules (WTSR), signed off Risk Assessments (RA) and work instructions and Approved Written Procedures (AWPs)
- All requirements inline with the annual service manual
- Execution of work in accordance with a 1, 2, 3, 5 and 10 year service requirement depending on the life of the asset
- Completion of all isolations and low voltage service requirements
- Carrying out “Test for Dead” prior to completing tasks after electrical isolations are complete
- Undertaking service work on hydraulic and pneumatic pressure systems
- Grease, oil and coolant checks, all mechanical works including bolt torque, hydraulic bolt torque and tensioning
- Recording all work carried out during the service requirements in both hard and electronic copies
- Cleaning of foundation for handover

Our aim is to be our clients' Partner of Choice
