

Coating and Inspection

ENGIE Fabricom UK has successfully delivered numerous coating and inspection campaigns.

We have proven capabilities to complete various coating activities including, but not limited to: -

- Application of new coating systems
- Coating repair of external and internal structures
- Coating inspections
- Rope access

Our coating systems provided, conforms to NORSOK M501 standards.

If required, we can provide independent coating inspections. These third party inspections are used to check the condition of the external and internal foundations, to determine that the required corrosion protection and coating systems have been implemented.

A report is provided documenting the coating status and specified grade should any remediation work be required to ensure protection from further corrosion.

Work is typically carried out from the client's onshore base ensuring all measures are taken during the coating activities to protect the environment.

Project specific stages may include:

- Compilation of work packs to enable efficient onshore and offshore resources
- Procurement / expedite of materials
- All works in accordance with NORSOK standards
- Carry out pre, during and post inspections
- Final preparation and handover to the client
- Complete final documentation packs

Our aim is to be our clients'
Partner of Choice
